FORESTRY BIG-BAG

AN INNOVATIVE WAY TO HANDLE YOUR FIREWOOD LOGISTICS

The forestry big-bag makes production, drying and delivery of firewood easier.

1 bulk filled bag = 1 face cord

No more time and labour consuming stacking. Our big-bags are designed to hold a face cord when bulk-filled with a conveyor.

Firewood dries inside the bag

Thanks to the two ventilated mesh sides, air can freely flow through the bag and your firewood will dry inside as well as if it was stacked.

Once inside the bag, no need to touch the wood anymore

Save space during the drying and warehousing of your wood. Once full, the big-bags are stable enough to be stacked on two levels.

Putting a pallet underneath the bags will optimize the airflow for drying.

Strong and reusable

Thanks to the black plastic fabric with superior UV-protection, our big-bags can be used outside for 4 to 5 years.

Big-bags can be reused several times as long as they are not pierced.

Space saving

Unlike a wooden or a metal crate, an empty big-bag takes almost no space.

OPEN-BOTTOM BAG

Dimensions:
37.8 x 37.8'
height 59 or
63 inch

Resists up to
1000kg (2200lbs)

Exclusive open-bottom mechanism allows fast and easy unloading.

Video available on
www.big-bags.ca

Easy to empty, our big-bags will simplify your deliveries.

Increasing customer loyalty

Leaving full big-bags to your customers and charging a depot for the bag will increase your customer loyalty. As the customer pays for a depot, he will naturally come back to you to fill his bag again.

DRY'N'TURN BAG

Dimensions:

37.8 x 37.8'
height 63 inch

Resists up to
1000kg (2200lbs)

Can be turned easily upside down with the bottom handles to empty the firewood.
